

ONLINE VIDEO FINDS A NEW SPOT

Video Vistas 1.0 Available To Everyone

“Our unique ability to display video and photos in the browser head has proved to be a winning configuration and our early users are really taking advantage of the application's ability to share that content without the use of email.”

Video Vistas, developer of a unique video skin for web browsers, first launched into a limited early beta over six months ago. Today, Video Vistas 1.0 is available to everyone. The unique video skin lets users play and share online video/photos directly in their browser heads, freeing screen space for simultaneous web surfing.

Several new features have been added to the application including the ability to display slideshows from Flickr in the browser head and the ability to play DVDs in the browser head. The new version also includes expanded content links and can display corresponding Youtube results alongside Yahoo and Google searches. Amazon's highly rated Unbox video service has also been incorporated, allowing users to download top name Hollywood movies and TV episodes for playback in the browser head.

“Based on what we've seen during testing, we expect our user base to expand quite rapidly,” said CEO Anthony Salvaggio, “Our unique ability to display video and photos in the browser head has proved to be a winning configuration and our early users are really taking advantage of the application's ability to share that content without the use of email.”

Video Vistas meets the needs of consumers who want to view online video and photos without tying up screen space. As a multi-tasking video tool, Video Vistas stands apart from the crowd and is the only technology in the marketplace that lets users view and share video/photo content in the browser head. Content from major names like Youtube, ESPN, College Humor, Revver, CNN and Flickr give users access to the web's vast repositories of recorded and streaming content.

There is no cost to consumers for Video Vistas 1.0 and the application is available for immediate download at videovistas.com.

About Video Vistas, Inc.

Raleigh-based Video Vistas, Inc. is the developer of a revolutionary new platform for the delivery of online video. The Video Vistas video browser skin creates a new online video experience that lets user multi-task while watching video and enables sharing of video and photos without email. Video Vistas, Inc. is privately held and angel investor funded.
